## Showing a Twitter feed on a dashboard

Toby Smith - 2017-06-21 - in Personalise Your Kahootz

One of the many ways to [customise your Kahootz dashboard](#) is to embed Twitter feeds. This means that you can view feeds of relevant accounts or hashtags without leaving your workspace.

This process requires setting up a "Twitter Widget" on the Twitter.com site and then putting that on your Kahootz dashboard using the **Applet** dashboard item. You will need:

- Access to a business or personal Twitter account (this can be any account - it doesn't need to be the account you want to display).
- To read and agree to [Twitter's Developer Agreement](#) and [Twitter Developer Policy](#).
- The ability to add **Applets** to a dashboard. Please note that these may be disabled by policy on sites with higher security settings.

To embed a Twitter feed on your Kahootz dashboard:

### First on Twitter

1. Log into your Twitter account at [twitter.com](https://twitter.com)
2. Click on your profile icon in the top right corner, and then choose **Settings**.
3. On the left-hand menu, click on **Widgets**.
4. Click **Create New** and select the type of feed you would like to display. ([Read more on Twitter's information about embedded widget styles and customisation](#))
5. Enter the web address or Twitter handle of your chosen feed, (for example <https://twitter.com/Kahootz> or [@Kahootz](https://twitter.com/Kahootz))
6. Select a display option, (we suggest **embedded timeline**.)
7. Click **Set Customisation Options** if you wish to make changes to the colour or styling.
8. Click **Copy Code**

### Then on Kahootz

1. Go to the Kahootz Dashboard you want to display the feed on, and click **Configure Dashboard** in the Actions Menu.
2. From the **Add New Dashboard Item** dropdown, choose **Applet** and click **Add**.
3. Your new Applet box will appear top left in the Dashboard grid, though you can drag and drop it to a different location.
4. Give your new dashboard item a title and paste the code you received from Twitter into the **Code** box.

5. Click **Save** at the bottom to save your changes to the dashboard

If you want to change the look and feel or content of the feed, there's many options on size and content listed on the Twitter site (see Twitter step 4 above). Any changes to those will update the code link on Twitter which you'll need to re copy and paste to the Kahootz dashboard to apply those changes.
